Statistical Computing with R 2nd ed. Errata

Maria Rizzo

8/2/2019

Corrections

- Exercise 8.1: In the second edition, it should be Exercise 9.1 (or 9.0).

- Last line of Section 12.1.2: For the ggplot version, "geom_frepoly" should be "geom_freqpoly".

Remarks

- Exercise 10.2: Refers to the ranks within the pooled sample. Sort each sample before pooling. Note that if there are ties in the data, by default ranks of ties are averaged. Use `ties.method="random"` to avoid this problem. See Anderson [15].
